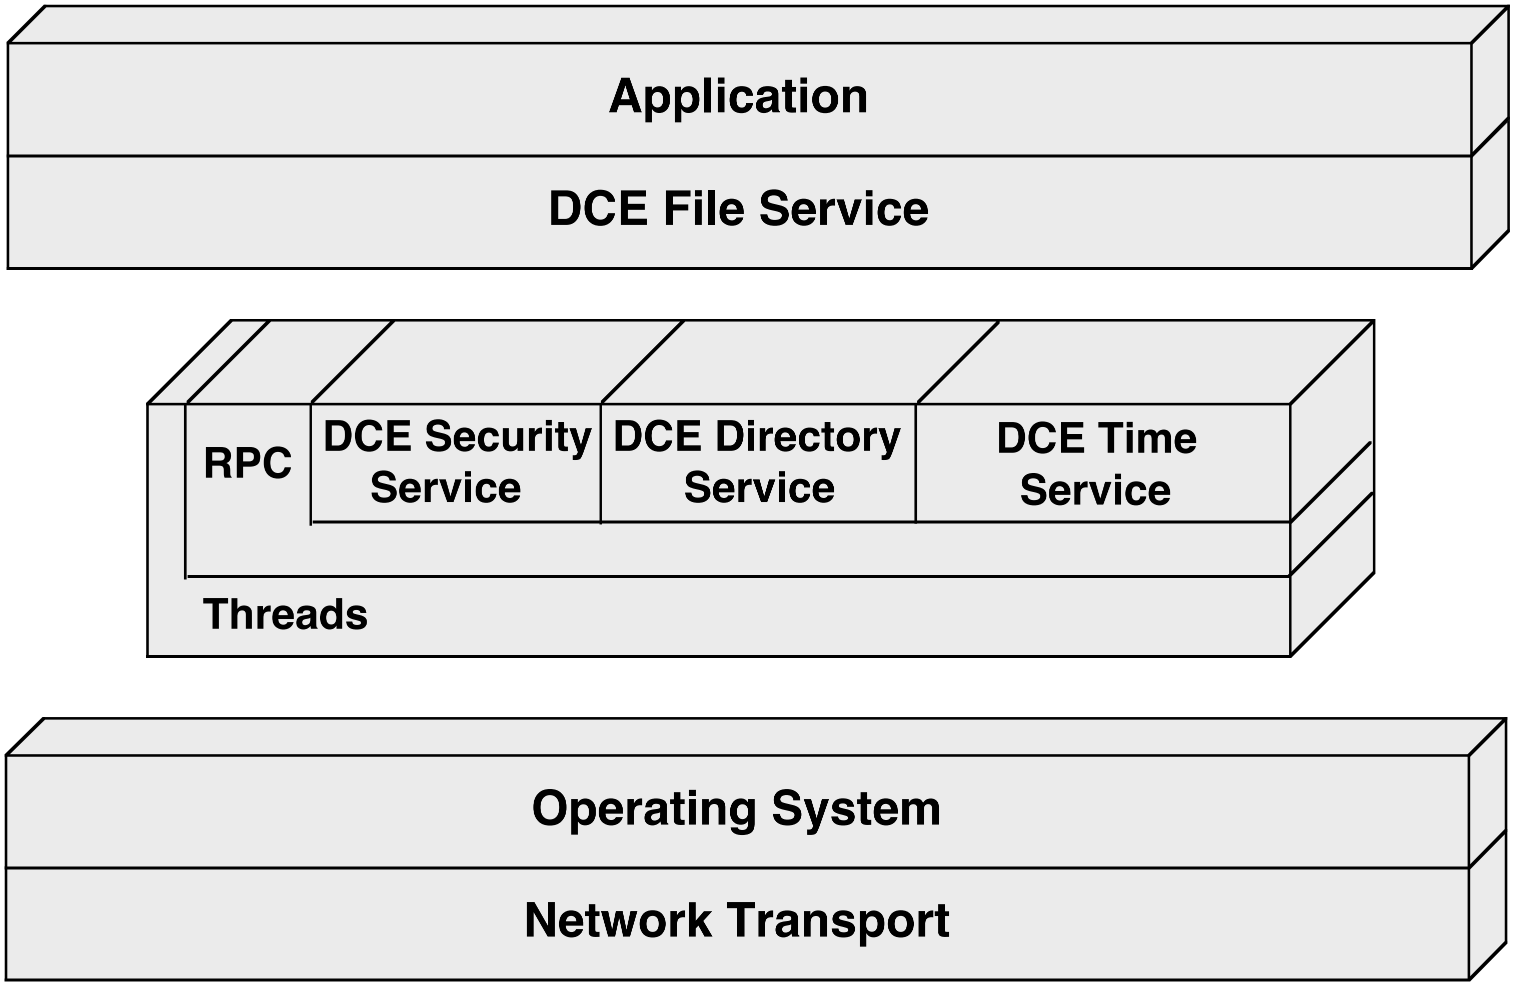
VisualAge™ Benefits

- VisualAge is an extremely powerful yet easy-to-use client/server application development environment. It enables you to quickly create applications with minimum coding.
- VisualAge provides an extensive library of parts that you can use to quickly build your own parts and applications.
- VisualAge enables you to create application business logic in a variety of ways. You can use Visual Programming Tools or code in native Smalltalk.
- VisualAge provides comprehensive support for client/server computing, including: legacy applications, split business logic and remote resource management.
- VisualAge Team Edition provides software configuration, versioning and code sharing capabilities.

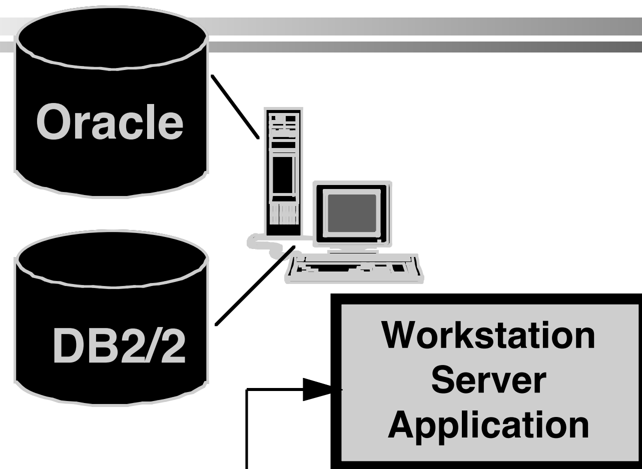
DCE Architecture for Distributed Computing

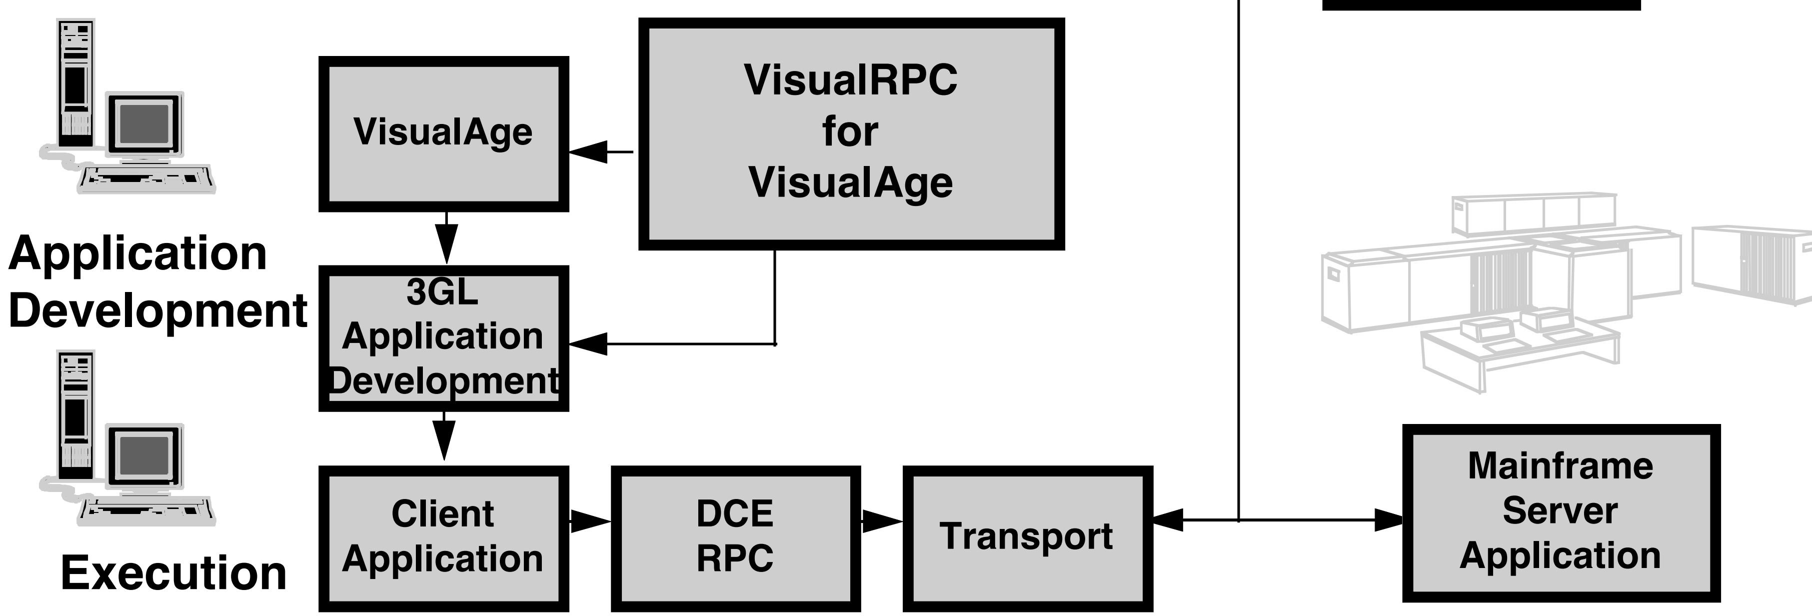


VisualRPC™ for VisualAge™

CROSSLOGIC CORPORATION

Using VisualRPC with VisualAge and DCE, an application programmer can create distributed client/server applications for workstation and mainframe servers.





VisualRPC™ Benefits

- VisualRPC builds the client/ server communications logic, eliminating systems level programming tasks for the applications programmer
- VisualRPC works with DCE RPC and IBM VisualAge, merging distributed and object-oriented technologies to improve application reuse and quality
- VisualRPC generates client and server communications stubs in ANSI C with Smalltalk wrappers allowing the generated C code to work with any GUI Builder or Smalltalk environment
